

780

Trepko 780 Series provides packaging solution of single bricks or bar-shaped packages into cartons of retail size. Products are collated into a given pack pattern and moved into preformed carton blank. Correct seal of the packaging is ensured by gluing on the long side of the box.

The 780 Series have a capacity of 60 boxes/min, matching even the highest brick wrapper capacities. A standard Trepko interface guarantees perfect integration with upstream and downstream TREPKO equipment. A simple format system enable changeovers in less than 15 minutes and allows the 780 Series to cater for a great variety of stick and box patterns. This way you can continuously match all your consumer requirements and the changing retail market trends.
